Relevant Experience

Frontend Developer · Nerotix Pvt. Ltd. 2025 — PRESENT

- Architect scalable web applications utilizing React.js and modern state management ecosystems like Redux Toolkit and RTK Query
- Drive the development of enterprise-grade products including real-time chat architectures and visual flow builders
- Develop comprehensive school management systems while collaborating closely with backend engineers and designers to deliver high-performance user interfaces
- Implement responsive UI designs ensuring cross-browser compatibility and optimized web performance scores

QA Engineer · Magic Software 2022 — 2024

- Conducted comprehensive testing of educational technology tools and platforms to ensure high-quality software delivery
- Rigorously tested features and identified bugs across multiple applications to guarantee optimal functionality
- Actively wrote code across the stack to resolve complex issues, optimize performance, and implement robust bug fixes
- Collaborated closely with cross-functional teams to establish QA workflows and automated test scripts for critical user flows

Education

Master's in Computer Application 2023 — 2025

Institute of Technology Management College

Bachelor of Computer Application 2019 — 2022

Maharana Pratap College of Technology

Skills

Languages

JavaScript, TypeScript, C, C++, HTML, CSS

Frameworks & Libraries

React.js, Next.js, Node.js, Express.js, TanStack, MUI, Tailwind CSS, Redux

Developer Tools

VS Code, Postman, Git, GitHub, Vite

Databases

MySQL, MongoDB

Coursework

DBMS, OOPs

Selected Projects

Nerochat

A comprehensive WhatsApp marketing and customer support platform. I spearheaded the development, architecting robust backend systems alongside complex interfaces including a visual drag-and-drop chatbot flow builder, a real-time shared team inbox, and dynamic campaign dashboards.

NotifyHub

A scalable, multi-channel notification infrastructure platform designed to manage and deliver messages across Email, SMS, and Push Notifications. Built with a focus on reliability and high throughput, it uses a queue-based architecture (Redis & BullMQ) to handle bulk notifications, featuring real-time analytics, failover mechanisms, and dynamic template management.

Interests

Web accessibility, science fiction & fantasy novels, The Legend of Zelda: Breath of the Wild & Tears of the Kingdom
